

Henry Schein One Offers Cybersecurity Solutions Provided by N-able

September 19, 2024

New Offering Brings Enterprise-grade Security Operations Center to Dental Practices of All Sizes

AMERICAN FORK, Utah – September 19, 2024 – [Henry Schein One](#) today announced the availability of new cybersecurity solution, [Adlumin Managed Detection and Response \(MDR\)](#), provided by [N-able](#) to help dental organizations better protect their businesses and sensitive health care data against growing cyber threats.

The solution provides dental organizations with powerful tools to help detect and potentially stop cyber threats, without the cost, expertise, or time needed to run an internal security center. Dental organizations with up to 20 practices, or larger groups with decentralized servers, can benefit from Adlumin MDR, offered through N-able, to help defend against cyberattacks.

The offering includes a team of experts who monitor systems around the clock to help identify and remediate threats that might otherwise go unnoticed. Additionally, N-able's pre-integrated Endpoint Detection and Response (EDR) is built into the offering so organizations can seamlessly enhance protection and strengthen their overall security posture. EDR monitors devices like computers and servers for suspicious activity, detects potential threats, and responds to them quickly by alerting security teams or automatically taking action to prevent damage.

"The volume and sophistication of threats facing dental practices and other health care organizations is continuing to increase. Attackers don't discriminate. Small and mid-sized organizations have been especially disadvantaged compared to their larger counterparts with deeper resources," said Alan Rencher, Chief Technology Officer at Henry Schein One. "Our solution combines N-able EDR's visibility into an organization's attack surface, while the MDR solution brings a platform that consolidates many elements of cybersecurity, along with the talent to manage it. This new offering will be significant in advancing cybersecurity for our customers."

N-able's MDR platform and team make sophisticated security operations accessible to organizations of different sizes. The platform helps reduce risk by leveraging advanced AI modeling, automated response playbooks and comprehensive security insights to identify and potentially stop threats before they cause damage. For smaller organizations or solo dental practices that have limited or no IT staff, it acts as an extension of their team, helping them stay more secure. The platform enhances overall security health, seamlessly integrates with existing technology, and scales with growth.

"The increasingly digitized world of healthcare means providers like dental organizations need more help than ever to combat today's cybercriminals as they grapple with a growing onslaught of threats while trying to balance day-to-day business operations with keeping their patients' data safe," said Mike Adler, Chief Technology and Product Officer, at N-able. "Henry Schein One is a renowned technology leader in helping dental practices of all sizes succeed and thrive, and N-able is proud to collaborate with them to deliver the enterprise-grade security capabilities their customers need and deserve."
